DESIGNERS AND MANUFACTURERS OF
URBAN STREETWARE AND LIGHTPOLES

GOLDSPAR

Goldspar's Yacht Squadron range revives the nautical traditions of Victorian-era yacht clubs who used gaff rigged masts as signalling flagpoles to start regattas and fly the pennants of visiting clubs.

Their use by clubs today adds a colourful focal point to such special occasions as match days and regattas.

The poles are manufactured to Australian Standards for aluminium structures with spun tapered tubes, heat treated and powder-coated to give the most durable exterior finish. Supplied complete and ready to erect on prepared footings.

Yacht Squadron flag masts require minimum maintenance and will give years of pleasure to club members and visitors.

Structural note:

Goldspar aluminium flag masts are manufactured to comply with Australian Standards (AS1170.2 -1989) from high quality 6063/6060 Series aluminium tube.

All poles have structural engineering certification for above ground structures. Consult your structural engineer for soil conditions and footing types.
